

News from the Stars:

OR, AN

PHEMERIS

For the YEAR, 1683.

WITH

Astronomical Judgements upon the Eclipses,  
Solar Ingresses, and Configurations of Heaven  
happening therein.

Beginning the Third from the Bissextile or Leap-year,  
and from the Creation of the WORLD  
5632 Years.

WHEREIN

you have an Account of what seems portended by  
the Heavens to be manifested in the WORLD in  
the same Year.

WILLIAM ANDREWS,

Student in Astrology.

non respice Carlos tuos, opus dignorum quorum  
Lunam & Stellis quas ita nescis: quid est mortale  
quod memor sis ejus? non filius hominis, quod  
es cum? P[sa]. 8.

Courteous Reader,

**L**est you should be imposed upon or abused with any Counterfeit or Surreptitious Almanack for this Year, passing under my Name, or having the same Title Page with this of mine; as I hear some were the last Year. I do hereby declare, that there is no Almanack but this, for this Year, 1683. Composed and owned by me. It being the 28th Year of my appearance in Publique.

W. Andrews.

## ADVERTISEMENT.

**B**ritannia Languens, or a Discourse of Trade, shewing the ground and reasons of the increase and decay of Land Revenues, National Wealth and Strength, with application to the present state and condition of England, France, and the United Provinces, Sold by Sam. Croucher in Popes-Head-Alley in Cornhill.

# OF THE ECLIPSES

Of the *Sun* and *Moon*, in this Year, 1683.

There will be Three *Eclipses* in this Year, viz. one of the *Sun*, and two of the *Moon*.

The first will be of the *Sun*, on *Wednesday* the 17 day of *January* about 3 of the Clock in the afternoon, (if the Air be serene and clear) it may be seen here in *England*. It will be very considerable here, in regard above 6 digits or parts of the *Sun's* Body will be darkned. You may see more of this *Eclipse*, in my *Observations* on the Month of *January*, herein: and its *signification*, in the last sheet hereof, to which I refer you.

The second *Eclipse* will be of the *Moon* on the first day of *February*, about 3 of the Clock in the afternoon: but will not be visible here in *England*, because the *Sun* is then above the Earth.

The Third will be also of the *Moon*, on the 28 day of *July*, about 8 of the Clock in the forenoon: but will not be seen of us.

The Glorious Planet *Venus* is our Evening Star this Year, 1683. to the 24 day of *January*: then she comes to a *Conjunction* with the *Sun*, and is our Morning Star from thence to the 17 day of *November*, and then she comes again to a *Conjunction* with the *Sun*, and from thence becomes again our Evening Star to the end of the Year.

*Cœli narrans gloriam Dei.*

Note

# Notæ Vulgares:

O R,

Common Notes for this present year, 1683  
according to both Accounts, viz.

Julian	and	Gregorian
12	The Golden Number.	11
12	Cycle of the Sun.	11
6	Dominical Letters.	C
6	Roman Indiction.	5
12	Epaſt.	21
18	Number of Direction.	29

## The Use of the Two ensuing Tide-Tables

**T**O find the time of Full Sea, or High Water in any of those places mentioned in the two ensuing Tide-Tables you must observe, First, the Age of the Moon, which you may easily find in the next following Table, wherein you have the Moons Age every day throughout this Year, 1683. And having therein found out the Moons Age, according to those directions mentioned for that purpose, in the side of the said Table: Then have recourse unto the said Tide-Tables, and look for the place desired, in the Head of the said Tables, with the Age of the Moon, in the Column under the Title of the Moons Age, and in the common Angle or meeting of those Lines, in the Col. under your place, you shall have the time of High Water in hours and minutes.

Yet Note, that the Tides do not always fall out exactly at the time found in these Tables, by reason of the difference of the Moons Latitude, High Winds, Land-floods, &c. which very often alter the time, yet this is the exactest Rule that can be given for the finding of them generally.

TABLE of the Moons Age every day throughout the Year, 1683, whereby with the help of the ensuing Tide-Tables, the time of High-Water and Full Tide may be found in those places there inserted.

The Type of the *Suns Eclipse* on the 17th day of this Month, about 3 in the Afternoon—

THIS Year is Usher'd in with a Considerable *Eclipse* of the *Sun*, in 8 Degrees of *Aquarius*: and a *Second Conjunction* of *Saturn* and *Jupiter* in *Leo*, occasioned by their *Retrograde Motion*: and this Month is full of *Celestial Configurations*; many of them being of a very rough and unpleasant nature: There being no less than *Six* important *Oppositions* of the *Planets* towards the latter end hereof, one upon another, viz. *Sol*, *Venus*, and *Mercury*, do oppose both *Saturn* and *Jupiter*. So many *Opposite Aspects* all together, we have not usually met with: Therefore it may be expected that they will have some very material significations as to the *Weather*, and *Mundane Affairs*. These *Oppositions* happen in *Leo* and *Aquarius*; perhaps the *Places* under those *Constellations* may now, or ere long, be sensible of their *Portents*; which if of a *Propitious Nature* it will be well—

They seem to signify, many *violent Storms*, and extraordinary *Boisterous weather* both at *Sea* and *Land*, to the *Loss* of some People—

Much *Snow*, and very *Cold Weather* for many days towards the *Months End*; perhaps some *Claps* of *Thunder* in some places; *Inundations*, &c—

1683. Febru-

**H**ere is an Invisible Eclipse of the Moon, as to these parts of the World, on the first day here of in 23 degrees of Leo—Its Effects seem not very considerable—

This Month the Heavenly Bodies have no Aspects happening amongst them, (omitting those of the Moon) but only a Trine of the Sun and Mars, which is of a serene Nature. However, the Portents of the turbulent Configurations of Heaven in January past, it is probable may now begin to be manifested in some Countries concerned by the Constellations wherein they happened: and many reports seem now signified by the Heavens to be abroad, relating some matters of consequence in agitation in some Countries beyond the Seas—and that difficulties in the publique Negotiations of some Nations draw nigh: perhaps the Turk may be troublesome unto some people, and much business of a hasty nature may attend some Countries of Europe. Humane Actions many, and of somewhat a bulic nature, especially in those Countries under the two Eastern Signs Leo and Aquarius—

Much cold weather at the beginning hercof of some days together; but the middle, and latter part of the Month will be favourable enough.

1683. March

# March hath xxxij. days.

Full Moon the 2 day, 23 min. past 11 at night.  
 Last quarter, the 9 day, 35 min. past 11 at night.  
 New Moon the 18 day, 42 min. past 3 in the morning.  
 First quarter the 25 day, 36 min. past 7 at night.

31			49	8	30	♂ ☉ 22.

**S**aturn is *Stationary* at the beginning of this Month, and then becomes direct in Motion; and now he and *Jupiter* are going on, and halting directly to another and third *Conjunction*, which they will attain unto in the next Month.

The *Heavenly Bodies* in this Month of *April* seem to declare, some weighty Transactions to be on foot in some places: The motion of Armies, and martial proceedings. God protect all *Christian* people from the *Turk* now and evermore: and keep them quiet among themselves.

'Tis probable, some *Forreign Countries* may be now concerned: and some places bordering upon the *Turk*, perhaps may be somewhat Alarmed by him——

News from *Germany, Denmark, Sweden, France &c.*——Several Rumours from some places beyond the Seas, and about *&c.*——the present Affairs of some Countries in *Europe* under *Aries* and *Libra*: where the *Stars* seem to intimate much *Business* to be now in hand.——

The weather will be seasonable for the most part of this Month; warm with some Claps of Thunder at the beginning; and towards the middle or latter end, 'twill be something cold with storms of Hail and Rain in divers places——

1683. May

Last quarter the 8 day, 25 min past 9 morn.  
 New Moon the 16 day, 29 min past 7 morning.  
 First quarter the 23 day, 40 min past 6 morning.  
 Full Moon, the 30 day, 43 min past 5 morning.

# MAYE Observations, 1683.

NOW comes the Third and last Conjunction of the two Superior Planets, Saturn and Jupiter in Leo: and Mars becomes Direct in Motion. There is in this Month, many Configurations of Heaven, most of them being of a very moderate Signification: for altho at the beginning hereof, Mercury is in a Quartile Aspect unto Saturn, and likewise to Jupiter, and Venus and Mars are in Opposition: yet afterwards divers serene Aspects happen: for here is a Trine of the Sun and Mars, and of Mercury and Mars, and the Sun, Venus, and Mercury, are in Sextile of Saturn and Jupiter. — All which seem to impart, indifferent Comfortable and Calm Actions: and that the Effects of this Month, will be in some Measure of an acceptable Disposition; as in Relation unto the publick Affairs of many European Nations: The some uneasie matters seem to attend some Eastern Countries, and the common Enemy of Christendom seems Bu- sic. —

Many Treaties and Leagues renewed and Establiſhed; and Ambassadors imployed from one Nation to another, for the continuing and settling of Peace and Unity.

As unhealthful time may be feared: Violent Fevers, or Contagious Distempers, do now perhaps appear in some Countries.

In this Month, the Weather will be Pleasant and Seasonable, sometimes very Wet and Dry; with some hard Thunder and Lightning in some places beyond the Sea, and also here in England. — God grant it be not Prejudicial where it happens.

# JUNES Observations, 1683.

**T**He *Sun* enters the *Tropical Sign Cancer*, on the 11th. day of this Month, about eighteen Minutes past eleven of the Clock in the Forenoon: at which Time, the *Heavens* are in a pretty *Amicable* and *Mild* Posture. There is some days before the *Suns Ingress*, a *Quartile* of *Mars* and *Mercury*; and of *Saturn*, *Jupiter*, and *Venus*: But after the said *Ingress*, *Mars* comes to a *Sextile* of *Saturn* and *Jupiter*; and the Stars seem serenely disposed for some time: No violent, or Considerable *Aspects* happening amongst them.——Notwithstanding, the *Effects* of the late *Conjunctions* of *Saturn* and *Jupiter*, being (Peradventure) to break forth in some parts of *Europe* and *Asia*: and Consultations and Debates of Importance appear, in some *Regions*, and *Cities* under the *Celestial Sign Leo*. *Italy*, *Rome*, *Bohemia*, *Naples*, *Sicily*, and some Part of *Turky*, seem now concerned; and some other places nearer hand, under that *Constellation*.——Things begin to stand somewhat dubiously, in some Parts of the World, under that *Asterism*: yet much Moderation seems used, in the Management of the publick Transactions of many Nations of *Europe*; to the Content of those which delight in Peace and Quietness: though some Turbulent Spirits may prove Active.

The *Weather* most part of this Month, will be *Hot* and *dry*: Though something *Cool* and *Stormy* at the beginning, or in the first *Week* thereof.

1683.

**M**ars now takes his leave of *Libra*, and passeth to *Scorpio*: He has been very long in *Libra*; for he came into it, about the latter end of *November*, 1682. and has continued in it ever since to this time. He is now no sooner entered *Scorpio*, but the *Sun* comes to a *Quartile Aspect* of him. — There are but few *Aspects* in this *Month* besides; and those that are, are not of any great importance: The *Moon* will be *Eclipsed* the 28th. day, but *Invisible* as to us. —

This *Month* seems to be much of the *Constitution*, and *Temper* of the two other *Months* last past, *viz. May*, and *June*: and matters of no very great *Concernment*, seem signified by the *Celestial Bodies* therein: Tho some *Countries* and *People* it's probable, may be somewhat fearful, that considerable *Matial Actions* and *Designs* are approaching: and that some *Material Difficulties*, will ere long attend some *Nations*. For now some of the *Effects* of the *Comet* in 1680. may perhaps operate in some places, under some of the *Constellations* which it passed through: Its *Effects* seem to have *Relation* unto some *Countries* in *Asia*, as well as in *Europe*: yea, and some in *Africa*, and *America* too. The *Motion* of some *Army* or *Armies*, out of one *Country* into another: and much *Business* of consequence comes now under *Consideration*. — And seems to draw near.

Hot and dry *Weather* generally in this *Month*; some *Thunder* and *Storms*, at or about the 13 or 14 days hercof.

# August hath xxx. Days.

# AUGUST 13 Observations, 1685

Many weighty *Configurations* of the *Celestiall Bodies* happen in this Month: and the *Heavens* are variously disposed: *Jupiter* comes out of *Leo* into *Virgo*, about the beginning hereof; and divers *Conjunctions* (and some of them pretty Eminent too) do now appear, viz. Of the *Sun*, *Venus*, and *Mercury*, with *Saturn* in *Leo*; and also with *Jupiter* in *Virgo*: Moreover here happens a *Quartile* of *Mars* and *Mercury*, of *Saturn* and *Mars*, and of *Mars* and *Venus*, in *Leo* and *Scorpio*.

A Month of Variety of Business, in divers Parts of the World under *Leo*, *Virgo*, and *Scorpio*; and their *Opposite Signs*.—A sickly time in some places: Many Robberies, and other Enormities committed: and Hasty and untuly Passages seem portended by the aforesaid *Configurations*.—Some Battel, or Skirmish where Armies are on foot: and some People are perhaps Labouring under some Inconveniences, occasioned by War and it's Attendants. A time of much News, and various Reports. Some persons seem not well pleased, but are of a thwarting Temper.—The *Turk* is Busy.

Some forraign Countries unsettled: Subject to Alarms; and Difficulties appear in the Affairs of some *European Nations*: *Italy*, *Rome*, and part of *France*, and *Swedeland*, *Poland*, *Norway*, *Hamburg*, and much of the *Emperor* of *Germanies* Dominions (amongst other places more Remote) seem now hinted at by the *Configurations* of Heaven.—

Very uncertain *Weather* in this Month of *August*, much *Thunder*, &c. in many places; *Hasty Storms*, great *Winds*, &c.—

1st Quarter, the 5 day, 12 min. after Mid-night.  
 the 10 day, 58 min. past 5. Afternoon.  
 Full Quarter, the 17 day, 10 min. past 1. Afternoon.  
 the 25 day, 16 min. past 3. Afternoon.

**M**ercury is come into *Sagittary* and the *Sun* makes his entrance into the *Autumnal Equinoctial* Sign *Libra*, on the 13<sup>th</sup>. day hereof, about 52 minutes past 6 of the Clock in the Morning. at which time, *Saturn* is almost ready to go out of *Leo*, into *Virgo* and  $\gamma$ ; into which he makes his entrance towards the latter end of this Month. The Position of *Alequin* at the said Ingress of the *Sun* in *Libra*, is attended with a *Quartile Aspect* of *Jupiter* and *Mars*, out of *Virgo*; and by no other *Material Configurations*. The position it self, seems to be of no very great Signification as unto *Mundane* concerns. — However, the *Portents* of the late *Configurations* of the *Planets* in *August* past, appear in some places Considerably.

Hot disputes, and Controversies about Religion. — The Affairs of some Nations meet with Obstructions, and the Carriage and behaviour of some People seem rash and uneasy. — Soldiers are employed in some parts beyond the Seas, &c. — Perhaps some considerable *Martial Negotiations* have lately happened, or do now appear. The Transactions of those places mentioed in the last Months *Observations*, seem now much Discours'd of.

Good Weather most part of this Month; Warm and Seasonable: High winds at the beginning thereof.

31	Fast.	18	13	0	48		(♂ ♀ 21.)

*Jupiter* is now fully come into *Virgo*; and the places in the World under that *Constellation*, will be in one kind or other sensible of his *Influence*, during his Continuance in that *Sign*: which will last times till *August*. — in the year, 1686. We wish his *Position* and *Presence* therein, may not prove of any ill Consequence, unto any *People* or *Countries* under that *Constellation* —

The *Heavens* in this *Month* are in a very acceptable *Posture*, and many *Aspects* happen of *Bernardine* Importance: It may therefore be hoped that the *Month* it self, as in Relation unto humane Transactions, will be no ways *Turbulent*. Whatever discourses may be abroad, friendly *Overtures* pass between some *European Nations* now; (Notwithstanding all late Proceedings:) and a general Disposition amongst many of them, unto Peace and Quietness. Sundry Treaties carried on, for the pacifying and composing of National differences, and the Minds of men generally seem inclined to Amity and Concord: for all some late Endeavours of some unquiet Spirits.

— Good News from the *West-Indies*, and several parts of the World. Many ships safely arrive to the benefit of the Merchant. Quick Trading both by Sea and Land: and divers things in Agitation for the publick Good of many places. —

Moderate and Pleasant dry Weather all this Month, and Warm also; the Time of the Year Considered. —

# NOVEMBER'S Observations, 1683.

*Juno* and *Mercury* are in *Conjunction* now with the *Sun* in *Scorpio*, and *Venus* and the *Sun*, in a *Quartile Aspect* unto *Saturn*: *Mars* comes to a *Trine* of *Jupiter*, and *Mercury* to a *Sextile* of them both. — The *Scene* of *Heaven* is not much changed, from what it was in the last month. Tho some people in some places seem somewhat dissatisfied, and Fears and Jealousies may discompose the Spirits of some. — Yet the *Heavens* do not import any Great or weighty undertakings now: for by the prudence of some worthy Persons, Matters are brought (in many parts of *Europe*) into a pretty Calm posture; the some publick Businesses in some Southern and Eastern Countries, may be now somewhat more orderly Managed; and some turnings and windings may happen, in the grand Affairs of some Nations; under the two *Constellations* of *Virgo* and *Libitany*. — Much News from divers places, under those *Asterismes*, relating something of Importance. However, things seem generally tending unto Unity in many places; the Variety of Businesses seems talk't off. — *Hungary*, *Dalmatia*, *Spain*, *Portugal*, some part of *France*, &c. seems now somewhat concerned by the Stars.

There will be much *Wet weather* in this *Month*; and perhaps *great Floods* in some places. —

December

1642 December hath XXXI. Days.

Last quarter, the 1 day, 43 min. past 5 morning.

New Moon, the 8 day, 19 min. past 2 morning.

First quarter, the 15 day, 21 min. past 9 at night.

Full Moon, the 23 day, 5 min. past 5 at night.

Last quarter, the 30 day 37 min. past 1 afternoon.

# DECEMBER'S Observations,

ON the 11th. of this Month, about seventeen Minutes past two of the Clock in the Afternoon, the *Sun* comes into the *Tropick* Sign *Capricorn*, at which time the *Moon* is applying unto the *Conjunction* of *Mars*; they being at the said *Ingress* of the *Sun*, posited in the 10th. of Heaven. Many *Aspects* of the *Planets* in this Month, do succeed the said *Ingress*; But seem to be of serene Significations. *Saturn* at the beginning hereof and *Jupiter* at the Latter end, become *Retrograde* in *Virgo*.——

A time of little or no Action; though some things of Consequence in some some places are under Debate. — The *Christian* part of the World seems pretty quiet, and free from trouble; Notwithstanding all *Turkish* and *Tartarian* Enemies: and the year it self seems to end well. For altho various Reports may be spread abroad, about some Passages in some *Regions* under *Virgo* and *Sagittary*, as in the last Month; yet pleasing Intelligence comes from divers Parts of the World, and things stand in many *European* Countries in a Moderate condition; and are not at present Subject unto any Interruptions: God grant they may so continue.——

Favorable Weather for the most part of this Month of December, and not very Cold.

# *Astrological Judgments*

For the Year 1683.

By William Anzelm, Student in *Astrology*.

MANY things of great concernment in Relation to the *Heavenly Bodies*. are in this Year, 1683. to be considered. What is most observable in the first place, is, the *Conjunctions* of *Jupiter* and *Mars*, and *Saturn* and *Mars* in September 1682. last past; whose effects will be of importance. Besides, the late *Conjunction* of the two *Superior Planets Saturn* and *Jupiter* in the Month of *October*, 1682. and the *Eclipse* of the *Sun* in *January* this Year, 1683. and two more *Conjunctions* of the said Planets, *Saturn* and *Jupiter*. in the Months of *January* and *May* of this said present Year, seem all to have v.ry remarkable and eminent Significations.

Moreover, in this Year, 1683. some of the effects of the *Comet* which appeared in 1680. seem designed to be manifested in those parts of the World, that are under the *Constellations* of *Heaven*, wherein it passed through. *Comets* are accounted by the learned, amongst the noblest signs which are visible in the Air: We must not therefore think that they are sent forth only to be gazed on in their passage, but for tokens and signs of some extraordinary Events, and matters to succeed: and in regard the aforesaid *Comet*, passed through no less (according to some accurate observations in some Countries made thereof) than 7 or 8 *Signs* of the *Zodiack*, (for it began to appear in some places of the World, according to some *Observations* in *Libra*, (some say in *Virgo*), and so passed through *Scorpio*, *Sagittary*, *Capricorn* (wherein it was when I saw it first) *Aquarius*, *Pisces*, and *Aries*, and disappeared in *Taurus*; so a very great part, or half of the habitable World, will by degrees in one kind or other, be sensible of its portents. Some publick casualties have already happened in some Countries since its appearance; particularly, great and prodigious Storms, and dreadful Inundations, on the 16. of *January* last past, 1681. in *Holland*, *Zealand*, *Brabant* and *Flanders*, to the

great loss and damage of those Countries and their Inhabitants, (as is sufficiently known) whereby a great Number of Cattel perished, many Lands and Polders were quite laid under Water, many Dikes and Walls beaten down, abundance of Goods and Merchandizes spoiled, and many thousands of people drowned, some Relations thereof have said in all near twenty Thousand. In many places, nothing but the tops of Steeples were to be seen. The losses which those Countries sustained by the sad effects of the said Inundation, being computed to be at many Millions.

Truly it is, in my *Astrological Judgments* for the Year 1681. I intimated, that the *Conjunction* of *Saturn* and *Mars* in *Cancer*, on the 20. of *August*, 1680. (whose effects I there treated of in the third and last sheet of my *Almanack* for the said Year, 1681.) did seem to be of a passive signification unto those Countries and People, that were under the Sign *Cancer*, the said *Constellation* of Heaven wherein the said *Conjunction* happened: (under which is *Holland*, *Zealand*, and much of the *Low Countries*;) and in the first page of the said sheet, I wrote thus, (as you may there find) viz. that that *Conjunction* signified, "Inundations or overflowings of the Sea Banks Northward or North East: and in the second page of the same, you shall also find these words, viz. "Besides, there seems thereby signified, that some people Northward or North East may be sensible of some considerable loss by some sudden flood, or floods, or the breaking in of the Sea amongst them, which God prevent. And in the next page thereof, viz. the third, I further wrote, — "God keep the Low Countries from all Infections, Distresses, Casualties by Water, and all Distempers and Distresses, whatsoever, during the effects of this *Conjunction* — And although the aforesaid Inundations happened not, until the said *Almanack* for the said Year was expired, yet notwithstanding, 'twas not long after before they appeared, viz. in the Month of *January* next following the Expiration of the same. *Corpora Celestia non agunt in instanti, sed in tempore*. The *Celestial Bodies* operate not on a sudden, but in time, or with some delay: and the effects of any *Conjunction* of the *Planets*, continue in force till another of the same

Planets

shall happen. These two Planets meet here in two Years or thereabouts, in the sign or effect of the *Blackie*, and their last Conjunction was in September, 1682. last past (as is aforesaid) in *Leo*, whose effects will be manifest in one respect or other, in this present Year, 1683. And the best, in those places of the World that are under the said *Conjunction*; of which more hereafter in the following discourse.

Indeed, not only the aforesaid Conjunction in 1680. but the *Crises* beforementioned in the same Year also, did fetch sometimes by its Colour to have signification of some *Calamities* in some places by Water: and the Colours of *Comets* are very much to be considered, in judging of their effects, as the learned tell us.

There has been also since the appearance of the said *Comet*, an Earthquake at *Pavia*, and at divers other places in *France*, viz. on the 12th Day of May last past, 1682. (1682 *Mao*) about two of the Clock in the Morning: But it did no great harm, though in some places in *France* it was so violent, that it shook very much the Houses, and Churches, and threw down several Hills. *Comets* have very great Effects, as the Histories of all Ages testify: 'Tis affirmed by the learned *Jamblicus*, *Speusipus*, *Aristot.* pag. 812. That *Cometae* sunt spiritus fixitatem, pestem, famem, &c. The end wherefore *Comets* do appear, is, to shew Dryness, a Plague, Famine, War, motions of Kingdoms, and Commonwealths: *bellum, veritas, pestis, morbus, sterilitas, etiam, Cometae* Consideration: Also great and immoderate Winds, Earthquakes, Dureness, and great Heat. *Ortus Cometarum est in visum popularum, citius ut morbi visum subitiorum, &c.* The Appearance of *Comets* (saith the learned *Plinius*) is the fate of all People, subject to their Choice and Motion, they do generally denounce evil and misery: either liberty or bondage, or some new thing, &c. But I come now to speak something

Of the Effects of the before-mentioned Conjunction of *Jupiter* and *Mars*, and *Saturn* and *Mars* in September last past, &c.

FIRST of all, 'tis observable, that this said Conjunction of *Jupiter* and *Mars*, and that of *Saturn* and *Mars*,

## Astrological Judgments

and likewise that of *Saturn* and *Jupiter*, in *Orbs* before-mentioned, happened almost after another within the space of six Weeks or thereabouts; and all seem'd to some respect to have Relation one to another, (as being all in one Sign and Constellation of Heaven; and although the Conjunctions of *Jupiter* and *Mars* of themselves, are esteemed not to be so Efficacious, as those of *Saturn* and *Mars*; for those of *Saturn* and *Jupiter*, yet seeing that this said Conjunction of *Jupiter* and *Mars*, had special Relation unto those other two said conjunctions, which did very quickly succeed it; will have some Material Effects as well as they, which will operate with the Effects of those other two Conjunctions.

It is the opinion of *Haly*, folio 392. *De iudiciis Astrolog.* That when *Mars* shall be in Conjunction with *Jupiter*; it denotes multas lites, &c. much Strife, quarrelling, and debate, in that Climate under the Constellation of Heaven wherein it happens: *Etiam accidit morbi populari & mortalitates*, &c. Also, there will happen Morality and Diseases amongst People; and some unusual fights in the Air; that the beginning of the Year will be fruitful, but afterwards very dry—And seeing the said Conjunction of *Jupiter* and *Mars* happened in *Leo* as aforesaid; *Cholerick* Sign; and that *Mars* presently after his said Conjunction with *Jupiter* applied to the Conjunction of *Saturn*, (for the Conjunction of *Jupiter* and *Mars*) was at or about the 9th of September aforesaid, and that of *Saturn* and *Mars* at or about the 12th Day of the same Month.) Religious persons, or those pretending unto Religion, or of different Judgments from the profession of that Religion, which is established by Authority in some Countries, seem conceited by this said Conjunction; and during the continuation of its effects, some hot disputes and controversies may arise in some places touching Religion, or about the Privileges, Rites, and customs of some Nations, occasioning some rough actions and proceedings.

I do proceed to the Conjunction of *Saturn* and *Mars*, and say, the Ancients have affirmed, that — *Res maxime & miranda in hoc mundo eveniunt a Conjunctione Saturni & Martis in Leone*—Some great and notable things, do most commonly happen in the world after a Conjunction of *Saturn* and

and Mars in Leo. — There hath been within these 120 Years unto this present time, only six Conjunctions of these two Planets in that Sign, viz. On the 15th of May 1576. they were in Conjunction in 19 Degrees and 24 Minutes of Leo — 1584. May the 30. they were in Conjunction in 13 Minutes of the said Sign. On the second of July 1594. they were in Conjunction in 11 Degrees of Leo — 1624. the second of August, they were in Conjunction in 24 Degrees and 57 Minutes thereof. On the 10 of August, 1632. they were in conjunction in 6 Degrees and 1 Minute of Leo: and on the twelfth of September last past, 1682. they were in Conjunction in 16 Degrees and 41 Minutes thereof.

Leo, the Sign aforesaid, is the House of the Sun, or Sign wherein the Sun has greatest power and strength; as being very hot and dry, and wholly agreeing with his nature and disposition. — For the Ancient Astronomers have found out and tryed by experience, that the Planets do then and meet their strength more in some certain places of the Zodiac than in other some, and therefore are said to be more strong and better fortified in those places than in others; which thing happeneth, because the nature of those places, and of the Stars which are in those places do accord, and agree better with the nature of the Planets; insomuch, that there is a certain Sympathy or agreement between the nature of the one and the other, and for this reason, those places are called the Essential Dignities of the Planets, which are five in number, viz. House, Exaltation, Triplicity, Term and Face. This aforesaid Sign Leo, is not only the House of the Sun, but he hath a Triplicity also therein: and in this Sign also are the three Conjunctions of Saturn and Jupiter before mentioned, as I shall have further occasion to mention presently when I come to treat of their Effects.

Hall saith in his before-quoted Book, folio 398. *Quando Mars junctus fuerit cum Saturno, sunt quilibet alteri fraudes & deceptiones, & erunt inter homines pericula & vulnera* — When Mars shall be joyned unto Saturn, it signifieth much fraud and deceit to happen in the world, and among men Wounds and Fightings, &c. — and some of the Ancients have also affirmed, that when there is a Conjunction

of *Saturn* and *Mars* in *Leo*, there will be strife and contention amongst great men; and there will happen unnumbered misfortunes & losses, great sorrow and damage. Besides, some *Astrologers* do further say, that when these two Planets shall be in Conjunction in a fixed Sign as now, *Impedimenta sine significat*, &c. They signify continuant and fixed impediments or prejudices to men; and that diseases of the Belly, and Stomach, and other Distempers, will vex and torment Human Bodies, &c.

The truth is, Conjunctions of *Saturn* and *Mars*, have been always, or for the most part disliked, in regard these two Planets are accounted by all *Astrologers* both *Ancient* and *Modern*, to be of an ill and unpleasant nature and disposition of themselves, and much more when united. But the influence of their Conjunctions seem more pernicious in one Sign of the *Zodiac* than another, as the learned say: However it hath been heretofore observed, that seldom or never any Conjunction of them happened in *Leo*, but some choleric, rash, and hasty actions and passages have ensued, in the places of the world concerned by, or under that Constellation: and that sometimes after such a Conjunction, the minds of People in some Countries have been incited through choler, to an unruly and unquiet carriage and behaviour; and some Nations inclined to war and contention; and that many Robberies, private Murders, Battles, and slaughters of People, perilous Diseases, great Fyes, unhealthful Air, fierce Tempests of Thunder and Lightning, with prodigious Storms of Hail, hot and parching Summers, scarcity of Water, &c. have not long after succeeded the same, in those parts of the World unto which it had relation.

This late Conjunction of *Saturn* and *Mars*, in 1682, seems to forebode troubles to *Italy*, or much detriment to some part thereof, either by War, or by Fye, Sickness, &c. and the City of *Rome*, *Scicily*, *Bolonia*, the City of *Prague* therein; *Syracuse* and part of *Turky* seem thereby concerned, and some places nearer hand: Also *Tartaria*, *Moscovia*, the South part of *Swedeland*, and many remote places. In brief, it seems to be of an unpleasant signification, and to intimate, that

that

for the year 1683.

that some Countries will be oppressed with War and its in-  
conveniences, and that some hot disputes will happen in some  
parts of Europe both at Sea and Land. The great God of Uni-  
versen unite all *Christian Nations*, and compose all controversies  
that are, or may arise amongst them; that the *Turk* that  
Grand Enemy of *Christendom*, may not by their divisions  
have any opportunity during the effects of this Conjunction  
to molest them, nor be able any ways to take any advantage  
of them: and so I proceed to deliver —

Some Observations upon the three eminent Conjunctions of the  
two Superiour Planets, Saturn and Jupiter, at this time al-  
so to be considered.

**C**onjunctio media Saturni & Martis significat eventum, &  
res maximas, scilicet, Conjunctio Saturni & Jovis  
major, & significat, &c. A Conjunction of Saturn and Mars  
is accounted a mean Conjunction, yet it significeth great e-  
vents: But a Conjunction of Saturn and Jupiter is greater,  
and significeth greater events, &c. — Indeed, the Conjun-  
ction of Saturn and Jupiter, is always esteemed to be of  
greater importance and signification than any other Conjun-  
ction whatsoever, they being the most *Superiour Planets*, and  
whose motion is more ponderous and slow than any of the  
other; inso much, that they come not to Conjunction but  
once in 19 Years and 318 Days, or thereabouts.

However, *Cardan* saith, and also *Origanus*, that there is  
a threefold Conjunction of Saturn and Jupiter, viz. *Major*,  
*Media* and *Minor*, Great, Mean and Lesser.

The *Great Conjunction* is that which happens first in the  
*fiery Trigon*, after their return into the same; but chiefly in  
the Sign *Aries*, and this comes to pass but once in 794 Years  
331 Days, or thereabouts.

The *Mean* are those which fall in Signs of a different *Trigon*,  
yet not in such as are altogether of contrary qualities; that  
is; when their Conjunctions pass from a *fiery* into an *Earthy*  
Sign; or out of an *Earthy* into an *Airy*; or from an *Airy*  
into a *Watery* Sign; and this is once in 198 Years, and about  
265 Days —

The *Minor* or lesser Conjunctions are those which fall out

in Sign of the same *Nature* and *Triplcity*, with others going before them; and this is once in 19 Years 218 Days or thereabouts, and of this kind are these three Conjunctions we now treat of.

The Conjunctions of these two Planets *Saturn* and *Jupiter*, returned into the *Fiery Triplcity* about the 7th of December, 1603. and their first Conjunction therein after their said return, was then made in 7 Degrees and 48 Minutes of *Sagittary*; and this is accounted the last *Great Conjunction* of these two Planets.

Their next Conjunction was upon or about the 7th of July 1622 in 6 Degrees and 45 Minutes of *Leo*; and this is reported to be their first *Minor Conjunction* after the aforesaid *Great one*.

Their second *Minor Conjunction* was at or about the 14th of February, 1642, in 25 Degrees and 46 Minutes of *Pisces*, and this was an irregular and not vulgar *Congress*; in regard it should have been according to course, in the Sign *Aries*.

Their third *Minor Conjunction* was on or about the 10th of October, 1663 in 13 Degrees and 13 Minutes of *Sagittary*.

And their Conjunction on the 23 of October, 1682. last past, in or about the 20th Degree and 9th Minute of *Leo*, was their 4th *Minor* or *Lesser Conjunction*, being the 5th Conjunction of those two Planets, which hath happened since their said last return into the *Fiery Trigon*. And in regard quickly after their Conjunction in October aforesaid, they became *Retrograde*; it so falls out, that they meet twice again not long after, viz. in *January* and *May* this present Year 1683. which seems to be very rare, there being 3 Conjunctions, or meetings of them within the space of seven Months —

The learned do affirm, that this last return of the Conjunctions of *Saturn* and *Jupiter* into the *Fiery Trigon*, which began in 603. as aforesaid, is the seventh return since the Creation of the World; whereupon some have conjectured that the Conjunctions of these Planets in this *Trigon*, in this their seventh return, will have more *Important* and *Mysterious* significations, than any of the other that ever were before them — which they conceive (as I suppose) by reason of the great weight

for the year 1683.

light and concernments of the *Number Seven* in its self; of its various and manifold power—— Therefore some *Astrologers* have heretofore called this said *Seventh* year, of the Conjunctions of these two Planets *Saturn* and *Jupiter* into the *Fiery Trigon*, a *Sabbatical* return—— The same is, the first Conjunction of these two Planets in the *Triplcity*, was (according to the best account) three Years after the Creation of the World, in or about the 2d Degree of the Sign *Sagittarius*; and although the time of the Creation is uncertain, yet it is most generally received, that either the World was created under the first Conjunction of them in this *Triplcity*, or that their first Conjunction therein was not long after, viz. in or about the Year before *Christ*, 3938, But of the *Julian* period 755 in or about the beginning of that Month, which we now call *February*; if so, then the Conjunction which was in 1603. as aforesaid, was the 8th entrance of the Conjunctions of these said Planets into the *Fiery Trigon*, and that was the 8th great Conjunction of them—— *Significatur prima Conjunctio, &c.* If we omit the great Conjunction, which is supposed to have happened in the Creation it self (saith *Affledius* in his *Chronology of Great Conjunctions*), and number the great Conjunctions that have been since, they will appear to be only *Seven*; but if we reckon that which was at the Creation too, then there have been *Eight*——

'Tis not my intent or design to be profuse in my present discourse of these Conjunctions of *Saturn* and *Jupiter* in 1682. and 1683. thereby to amuse the World with their Events: Notwithstanding, some *Astrologers* of former times have said, that—— *Conjunctiones Saturni & Jovis res mutant & convertunt*; The Conjunctions of *Saturn* and *Jupiter*, do convert and turn things, and great changes and notable Actions in the World have usually succeeded them, as experiences manifest.

To erect a figure of *Heaven* for the time of these Conjunctions, is a thing of much difficulty; or indeed to speak the truth, not attainable: *Nullius Plana cam alio praeferam cum Luna, exacta conjunctio, &c.* The exact Conjunction of no Planet with another (saith *Cardan*) except the

## Astrological Judgments

Now, as that the sign ascending may be known, cannot be obtained; Nay, there is such a disadvantage, that no mortal Man (saith he) neither with instrument, nor otherwise can discern it; and this has been the opinion of many learned Men besides, and of some very able *Mathematicians* of our time—Insomuch, that the late industrious and eminent *Mathematician* of this Nation, Mr. *Vincent Wing*, after the Calculation of the Conjunction of *Saturn* and *Jupiter*, Anno 1663. in his *Ephemerides* for that Year, hath expressed himself touching the same in these words, viz—“To erect a Scheme of Heaven at the  
“time of this Conjunction, is too great a curiosity for any  
“attempt; for if we do but judiciously consider the great dif-  
“ficulty in observing the true places of the Stars and Planets  
“with Instrument, we shall waive such niceties; for I am one  
“of the most curious Observator on Earth, though his In-  
“strument be never so large and exquisitely divided, yet may  
“fail two or three Minutes at some time, in taking the place  
“of any Star, as Tycho himself hath sundry times experimented,  
“who with his Coadjutors and Assistants did usually make several  
“Observations at once in different places, about taking the  
“Longitude and Latitude of one and the same Star; so that  
“hence the best Tables built upon Observations, must of necessity  
“say fail somewhat of truth, though not much, being directed by  
“an able Artist. As in this Conjunction, should we fail but one  
“Minute in the place of each Planet, we should miss no less  
“than eight whole Hours of the time of the Conjunction, which  
“with the best instrument that can be used, is scarce discern-  
“able; the farther proof whereof I leave to the consideration  
“of the Judicious, but not to the fancy of every vulgar  
“Practitioner. Thus far he—and as unto this business, *Humanus intellectus non comprehendat*, saith Naibod.

The great Conjunction that was in 1603. before-mentioned, was observed by Sir *Christopher Heydon*, whose Observations thereof are conceived (as one hath judiciously observed) to be as exact as could be performed by any mortal man; and they are accounted so by some the rather, because of that near agreement in time they had with those made thereof, by that famous *Mathematician* John *Kepler* at Prague in *Bohemia*; who differed only 13 Minutes of time from Sir *Christopher Heydon*. (being re-  
cc

for the year 1683.

in the Meridian of London) which difference might arise, well in error of Longitude, as Sir Christopher Heydon hath. Care and diligence was very great in observing the places of the said Planets, both at the time and several days before and after that Conjunction.

*tem videris Conjunctionem vel oppositionem superiorum in triplicitatibus Ignea vel Atria, non festines iudicium, nec idem trades parvis, &c.* when thou seest, saith Cardan, a Conjunction or opposition of the Superiour Planets in the Fiery or Aery Triplicity; be not hasty to deliver thy judgment thereupon, neither of small matters, especially if the Sun, or two of the Superiour Planets be in those Triplicities, for these two Triplicities cancel the other: those of the first or Fiery Triplicity, do exalt in height and glory; those of the Aery, do operate in, or manifest the goodnes and profoundness of Wit.

Indeed, as the Fiery Triplicity is the first and chiefest, and to be preferred before the other for its power and efficacy: So the Conjunctions of Saturn and Jupiter therein, seem of a high nature, and are of greater value and estimation, than their Conjunctions in any of the other Triplicities. The Signs Aries and Sagittary, compose and make up this Triplicity: and inasmuch as the Sign Leo, is a Regal and very eminent Sign, and contains in it self some principal fixed Stars of much vertue and influence: Therefore the Conjunctions of these said two Superiour Planets, at any time in this Sign, may very well seem to have no mean or trivial Signification, more especially now, in regard they are thrice conjoynd therein, in such a short space of time as aforesaid—*Andreas Argatus* in his *Ephemerides* for this year, 1683. Calculated for the Meridian of Rome, writes thus—*concelebretur Coniunctio Superiorum Saturni & Jovis in trigono Aries, antiquorum consensu mutationes magnae contingent, & generales constitutiones, ac de facili dominorum mutationes.*

The effects of these three Conjunctions of the two Superiour Planets, will in all probability operate very effectually in those countries and places of the World under Leo, the aforesaid constellation of Heaven wherein they happen, and Aquarius, the opposite sign, and will continue in force twenty Years; in such time the world may be sufficiently sensible of some great unexpected Catastrophes and Revolutions, and many Consultations

## Astrological Judgments

*situations and Affairs of Superlative concernment may appear in divers parts thereof.*

*Afflictus* and some others have laboured to perswade the World, that these Conjunctions in the *Pier Triple* is, will have some extraordinary influence upon the City of *Rome*, to its detriment, &c. Others there are, that conceive that *Mahomet* and his Religion had their rise under the influence of the Conjunctions of these Planets in the *Watery Trigon*; so his Law and Religion will be subject to great Alteration, from the Effects of the Conjunctions of those *Superiour Planets* in Signs of *Contrary Qualities*, if not totally subverted, then shall follow an universal Peace, &c. and the Faith of *Christ* shall be much more enlarged throughout the World; and of this Judgment was *Spireus* a learned Italian of *Mantua*——Some *Mahometan* Countries are indeed by *Astrologers* affirmed to be under *Leo*, amongst divers other Countries and places, &c. and during the Effects of these Conjunctions in these next twenty Years, the *Turk* may endeavour to enlarge his Dominions, and may thereby put in mind, and excite many *Christian Princes* to unite and prepare for their own safety, and strongly to oppose him.

As unto these three aforesaid Conjunctions of *Saturn* and *Jupiter*, that which happens in *January* this Year, 1683 is most to be disliked, because it is a *Retrograde Conjunction*: besides it is attended with many Configurations of a very sturdy and turbulent signification; and therefore it may be feared, that many Actions and designs of a cross and unforward nature and disposition will succeed it, and that considerable difficulties will happen in the Affairs of divers Countries and Places thereby concerned, and some great Controversies in the world, and Discords and Debates in some places thereof, between some People and their Rulers, and among some persons of great eminence and quality——Also much mutation in the Air, and violent storms both at Sea and Land——But seeing these Conjunctions seem to signify much of what I have here before delivered, touching the two aforesaid Conjunctions of *Jupiter* and *Mars*, and *Saturn* and *Mars*: I shall therefore proceed no further at this time concerning them——

for the year 1683.

A word or two of the Eclipse of the  
Sun, on the 17<sup>th</sup> of January  
this Year 1683.

THIS Solar Eclipse happens in *Aquarius* a sign  
of the *Aury Triplicity*, and directly oppo-  
site to *Leo*, wherein are all the afore said Con-  
junctions. The Eclipse it self will be considerable;  
the *Suns* body being about three quarters dark-  
ned——At the middle time thereof, *Saturn* and  
*Jupiter* are in the second House of Heaven, in  
18 Degrees of *Leo* Retrograde: *Mars* is in the 4<sup>th</sup>  
House, in 23 Degrees of *Libra*; the *Sun* and *Moon*  
in the 7<sup>th</sup>, in 8 Degrees of *Aquarius*; *Venus* is in  
the 8<sup>th</sup> House, in 18 Degrees of the said Sign Re-  
trograde; and *Mercury* is in the 7<sup>th</sup> House——  
The *Moon* after her separation from the *Sun*,  
comes to an *Opposition* of *Saturn*, and then to a  
Conjunction of *Venus*, who is in *Opposition* both to  
*Saturn* and *Jupiter*——

The Eclipse begins in the 8<sup>th</sup> House of Heaven,  
and passeth into the 7<sup>th</sup>, and has Relation unto  
the before mentioned Conjunctions of *Saturn*, *Ju-  
piter* and *Mars*——*Junetinus* saith, that an E-  
clipse of either of the *Luminaries* in the *Airy  
Triplicity*, signifieth fierce Sicknes, pestilent  
Diseases, tempestuous and stormy Winds, dan-  
gerous and hurtful to mankind: And *Proclus* saith,  
when an Eclipse of the *Sun* shall be in the first  
decade

*Astronomical Judgment for the year 1663*  
degenerate of *Aquarius* as this is: It signifieth pub-  
lick grief and sorrow—

This *Eclipse* seems to portend various Air and  
Actions, the Ruin of some Ancient Foundations  
and Buildings, Shipwracks, and other Casualties  
occasioned by high and boisterous Winds—Much  
Thunder and Lightning, fiery Comets and  
Meteors in the Air, alterations of Laws and Cu-  
stoms, and unruly passages in some of those pla-  
ces that are under the Sign *Aquarius*, or concern-  
ed thereby, or *Leo* its opposite Sign—And so  
I conclude my Observations for this Year—

*Soli Deo Gloria.*

Reader,

Reader,

THE true, Plain, and Golden Spirits of *Scurvy Grass*, -being highly approved for their admirable Cures in the *Scurvy*, *Dropsie*, and several other general Distempers; are faithfully prepared by Mr. *Robert Bateman*, the first Author, and sold by him at his House in *Pauls Church-yard Doctors Commons, London*, and at many eminent Towns in the Country; they are also to be had with printed Directions for their use. The Bottles are sealed with his Coat of Arms, the *half Moon* and *Ermins*, to prevent Counterfeits. Price one Shilling the Bottle. These Spirits of *Scurvy Grass*, prepared by Mr. *Bateman*, are very effectual Remedies for the aforesaid Disorders, which I can affirm upon my own Tryal and Experience.

*William Anderson.*

Ruptures or Broken Bellies.

**P**resent help for Men, Women, or Children by a Traveller famous in *Germany* and other Countries for his practice this five and twenty Years; and maketh all sorts of Trusses easie, none such made in *England*, as these be found by experience. He helps those at a distance, as well with Directions, as those in *London*, and helps those that cannot hold their Water, or bearing down their Privy parts, and maketh strait Stockings. The Poor have advice for nothing. Take it in time. By *R. Collins*. From Nine to Twelve at the Bell and Naked Boy on the Ditch-side at Fleet-<sup>2</sup>Bridge. The Afternoon at the Bell in S. Joannes Court in *Corkenell* Parish.

**W**hereas since the Decease of *D. Lockyer*, many have been at a loss to know where his universal Pill is to be had, which is so famous in his Majesties Dominions and Plantations, by the Cures it hath wrought in the Scurvy, Dropsie, Stone, Consumption, Aches and Lameness of the Limbs, all sorts of Agues and Feavers, Gripings of the Guts, &c. This is to certifie, that it is only prepared by Mr. *Watts* his Nephew in S. *Thomas* Square; and Mr. *Fyge* Apothecary without *Bishopsgate*, *London*, whom he appointed his only Trustee for the same after his Death.
